Taste of Research Project Choices

The Taste of Research projects provide second year Advanced Science students to undertake a small research project within the School of Physics during Semester 2, 2015.

This scheme is voluntary. Participating students should expect to spend one afternoon a week for four weeks (or equivalent) working on the project. They will also be expected to write a short report and give a presentation about their project at the end.

To be eligible for participation in a Taste of Research project, students must be enrolled into an Advanced Science degree (or dual degree with Advanced Science), must have declared a physics major, and must be taking some second year physics subjects in 2015.

Students will work in pairs. You may nominate who you wish to work with on this form. If you don't nominate, we will pair you up with another student who is interested in the same project.

Please nominate 3 project choices. The deadline for applications is **Friday 17 July 2015**.

Name: __________________________________________________________

Student Number: __________________________________________________

Name and student number of partner (optional) ___________________________

Degree __________________________________________________________
